

GOURAV JAIN

Data Quality Test Manager | ETL / DWH / Data Transformation QA Lead | QA Delivery Manager

Jaingourav999@gmail.com | +91-9601874688 | linkedin.com/in/jaingourav999 | github.com/jaingourav999

PROFESSIONAL SUMMARY

QA Delivery Manager and Test Management professional with 15.5+ years of experience delivering enterprise testing programs across Banking, Financial Services, Payments, Healthcare, eCommerce and public sector domains. Strong background in leading SIT, UAT, integration testing, API testing, E2E acceptance testing, test strategy, governance, defect lifecycle management, stakeholder reporting and program-level delivery across Agile, Scrum, Kanban, DevOps and legacy ecosystems. Experienced in managing teams of up to 16 QA engineers across permanent, contractor, third-party and multi-vendor delivery models. Proven ability to define test approach, test plans, reusable test assets, automation strategy, quality gates, production readiness checks, MI reporting and executive dashboards for time, cost and quality-controlled delivery. Strong exposure to data validation, ETL-style testing, SQL-based verification, reconciliation, financial reporting, payment data flows, regulatory controls and enterprise integration testing. Hands-on experience with API automation, SQL databases, Power BI reporting, cloud and DevOps pipelines, with AI-assisted QA adoption using GitHub Copilot, OpenAI Codex and Playwright MCP Server. Positioned for Data Quality / ETL / Finance Transformation Test Manager roles with transferable experience across data completeness, accuracy, transformation validation, defect leakage, quality metrics and audit-ready test evidence.

CORE COMPETENCIES

Programme Test Management • SIT / UAT / E2E Acceptance Testing • Data Quality Testing • ETL / DWH Validation Support • SQL-Based Test Validation • API & Integration Testing • Test Strategy & Test Planning • Jira / Xray / Confluence • Defect Lifecycle Management • Test Forecasting & Burndown Tracking
MI Reporting & Dashboards • Data Reconciliation • Financial Data Validation • Regulatory & Compliance Testing • Audit-Ready Test Evidence • DevOps Quality Gates • Test Automation Ownership • Stakeholder Management • Vendor Management • Agile / Scrum / Kanban • Team Leadership & Capability Uplift

TECHNICAL SKILLS

Test Management & Governance: Test Strategy, Test Plan, SIT, UAT, E2E Acceptance Testing, Quality Gates, Production Readiness, Defect Triage, Risk & Issue Management, Test Forecasting, Burndown Reporting, MI Reporting
Data / ETL / DWH Testing: SQL Query Validation, Data Completeness, Accuracy, Consistency, Transformation Logic Validation, Reconciliation Testing, Data Warehouse / Reporting Validation, Data Mapping Review, Data Quality Checks
Automation & API Testing: Selenium 4.0 Java, Playwright, Rest Assured, Postman, Bruno, SOAPUI, Cypress, Appium, Jest/Supertest, Cucumber BDD, JBehave, TestNG
DevOps / CI-CD: Jenkins, Bamboo, GitHub Actions, Maven, Gradle, Bitbucket, Azure DevOps, Docker, Kubernetes
Databases / Data Platforms: SQL Server, PostgreSQL, MongoDB, AWS DynamoDB, CloudWatch Log Validation; exposure to cloud data validation and reporting systems
Reporting & MI: Power BI, Excel Dashboards, Allure, Serenity, HTML/XSLT Reporting, Defect Metrics, Execution Metrics, DORA / Flow Metrics
Cloud / AI Tools: AWS Certified Developer Associate, Azure Fundamentals Certified, GitHub Copilot Certified, OpenAI Codex, Playwright MCP Server, Testim.io, Tabnine
Project Tools: Jira, Xray, Confluence, TFS, Git, SauceLabs,

DATA QUALITY & FINANCE TRANSFORMATION ALIGNMENT

- Defined and governed program-level testing across financial services initiatives, covering test strategy, test plans, execution tracking, defect metrics, release readiness and stakeholder reporting.
- Validated complex financial and banking workflows through API, integration, E2E and data reconciliation testing across upstream and downstream systems.
- Used SQL-based database validation and backend verification to confirm data accuracy, transformation outcomes, API integration results, transaction processing and reporting quality.
- Established reusable test assets, automation frameworks, reporting dashboards and quality metrics to improve standardization, execution efficiency and defect visibility.
- Supported audit and compliance objectives through traceable test evidence, defect governance, release checkpoints, production quality checks and stakeholder sign-offs.
- Applied AI-assisted QA methods to improve test authoring, automation productivity, defect analysis and intelligent quality engineering adoption.

PROFESSIONAL EXPERIENCE

Manager / Architect – QA | Persistent Systems, Pune | May 2025 – Present
GB Bank – Banking Domain, Europe (Team Size: 8) | May 2025 – Present

- Lead quality governance and delivery management across banking transformation programmes, ensuring testing is delivered within agreed time, quality and cost constraints.
- Define programme-level test approach, test strategy, governance framework, quality gates, reporting cadence and release readiness controls across Agile delivery teams.
- Govern testing across UI, API, data and service layers, enabling end-to-end validation of banking workflows and integrated system behavior.
- Facilitate SIT/UAT governance reviews, defect triage, daily stand-ups, risk reviews and stakeholder checkpoints across engineering, product and business teams.
- Own production quality checks for new changes, enhancements and defect fixes, ensuring deployment readiness and post-release risk visibility.
- Produce MI reporting covering execution progress, defect leakage, defect ageing, automation coverage, quality trends, DORA metrics and release readiness using Power BI dashboards.
- Manage execution forecasting, burndown tracking, test prioritisation, RAID items and stakeholder communication for senior leadership decision making.
- Modernised QA infrastructure by building a Playwright + Cucumber + TypeScript framework, improving regression efficiency across UI and backend services.
- Leveraged GitHub Copilot and OpenAI Codex to accelerate test script generation and improve automation productivity within the QA team.
- Mentored 20+ QA practitioners in AI-assisted test generation, intelligent automation and shift-left testing practices while maintaining governance in financial services delivery.

Associate QA Manager | Accenture, Pune | October 2015 – May 2025

BNZ (Bank of New Zealand) – Wholesale Banking & Payments (Team Size: 16) | January 2022 – May 2025

- Led 3 QA pods comprising 16 engineers across Wholesale Banking, Insurance API and Salesforce workstreams, managing permanent, distributed and cross-functional delivery teams.
- Managed program-level SIT, UAT, integration, API and E2E acceptance testing across banking transformation initiatives and multi-system delivery streams.
- Defined test strategies, test plans, technical roadmaps, governance mechanisms and quality reporting structures across multi-tiered banking platforms.
- Collaborated with business SMEs, product owners, architects, developers and vendor teams to define test scenarios, execution plans, test data needs and release milestones.
- Supported financial close related testing, reconciliation validation, reporting flows and operational banking data validation across integrated systems.
- Executed and governed backend and API validation using SQL/database checks, API automation and log validation to confirm data accuracy, integration stability and transformation outcomes.
- Produced executive dashboards covering execution progress, burndown metrics, defect trends, forecast completion, risk areas and readiness status.
- Managed defect lifecycle including logging, triage, severity analysis, prioritisation, retesting, closure and stakeholder escalation through Jira-based workflows.
- Implemented reusable automation and validation assets using Playwright, Selenium, Rest Assured, Cucumber, TypeScript and Java, improving continuous delivery feedback loops.
- Increased test automation coverage from 75% to approximately 88% and deployed on-demand DORA and quality metrics dashboards for senior stakeholders.
- Introduced GitHub Copilot across QA pods for AI-assisted test code generation, improving automation authoring productivity and test delivery efficiency.

Commerzbank – Banking / Payments Domain | February 2017 – August 2019

- Delivered end-to-end QA and API automation across SEPA, SWIFT MT/MX, ISO 20022, CHAPS, RTGS and Faster Payments processing workflows.
- Validated payment data flows, transaction processing, message formats, routing logic, settlement outcomes, reconciliation and exception handling across cross-border payment rails.
- Performed API and backend validation for payment services using Rest Assured, Java, BDD Cucumber and SQL/database-driven checks to verify integration and data integrity.
- Validated SWIFT MT to ISO 20022 MX migration scenarios covering pacs.008, pacs.009 and camt message types, ensuring transformation accuracy and backward compatibility.
- Collaborated with business analysts, payment architects, external vendors and application owners to identify defect root causes and manage escalation across system boundaries.
- Established CI/CD pipeline integration using Jenkins, Maven and Bitbucket for automated payment regression, test reporting and faster delivery feedback.
- Defined KPIs and test metrics covering payment throughput, failure rates, STP rates, defect trends and operational quality indicators.

Adidas & Dyson – eCommerce B2B (Team Size: 10) | April 2021 – December 2021

- Led a team of 10 QA engineers across functional, automation, API and regression testing activities in an Agile delivery model.

- Automated 316 critical P1 test cases out of 515 using Selenium + Python UI automation and Rest Assured + Java API testing.
- Implemented Azure DevOps pipeline-based execution and reporting to support release quality checks, defect visibility and regression readiness.

UK Government Project – Public Sector | November 2015 – January 2017

- Designed and implemented BDD automation framework using Selenium WebDriver, TestNG, Cucumber, Allure, Docker and Kubernetes on AWS.
- Implemented CI/CD pipeline using Bitbucket, Maven and Jenkins, supporting automated regression, test execution and delivery visibility.
- Coordinated testing across multiple vendors in a complex multi-tier environment while supporting quality governance, defect management and release readiness.

Senior QA Engineer (Level 1) | eInfochips, Ahmedabad | January 2013 – October 2015

- Performed functional, regression and integration testing across multiple product lines and contributed to automation framework setup.
- Mentored junior QA members and supported defect lifecycle management, test documentation and execution reporting.

QA Engineer | AMD, Hyderabad | October 2011 – November 2012

- Performed hardware and software validation testing for AMD processor and GPU product lines, focusing on quality checks, test execution and issue reporting.

QA Analyst | EA Games, Hyderabad | May 2010 – October 2011

- Performed functional and regression testing on game titles across multiple platforms, ensuring defect logging, retesting and release quality validation.

FINANCE, DATA & REPORTING DOMAIN EXPOSURE

- Financial Services Transformation • Banking Operations • Wholesale Banking • Payments • Regulatory Reporting • Financial Close Support • Reconciliation Testing
- Data Completeness, Accuracy, Consistency and Transformation Validation • SQL-Based Verification • Reporting Validation • Data Integrity Checks
- Payment Processing, Settlement, Message Transformation, ISO 20022, SWIFT MT/MX, SEPA, CHAPS, RTGS, Faster Payments
- General Ledger aligned testing exposure, journal / reporting validation support, balance and reconciliation checks, audit evidence and compliance-oriented test governance

MANAGERIAL & LEADERSHIP SKILLS

- Delivery management across onshore, offshore and multi-vendor QA teams; hiring, mentoring junior SDETs and supporting capability uplift.
- Stakeholder management with APAC, UK, NZ and European clients; executive reporting through Power BI and Excel dashboards.
- Forecasting, estimation, resource planning, cost/value awareness, ROI analysis and prioritisation for enterprise QA programmes.
- Vendor management, third-party tool evaluation, RFP support and standardisation of reusable testing frameworks and accelerators.
- Risk identification, business impact analysis, test prioritisation, escalation management and release readiness decision support.
- Thought leadership in AI-augmented testing, GenAI tooling rollout, shift-left adoption and QA process innovation across programmes.

CERTIFICATIONS & ACHIEVEMENTS

- GitHub Copilot Certified — AI-assisted development and test automation
- AWS Certified Developer Associate
- Microsoft Azure Fundamentals Certified
- Accenture Delivery Foundation Academy 4.0 (DFA)
- Accenture Project Management Foundation School (PMFS)
- Accenture People Leadership Certification
- Lead Mentor — New Joiners, Accenture India DU
- Scrum Master — 2 years experience
